Subject index

Academic research
Do universities do too much research?: BARD **18**, 1.
Acetylcholine receptors
Signaling mechanisms mediating synapse formation: WALLACE **18**, 777.
Aconitase
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Action potentials
Connexins in mammalian heart function: GROS AND JONGSMA **18**, 719.
activins
The organizer formation: two molecules are better than one: LOMBARDO **18**, 267.
Adhesion receptor
Cooperation between soluble factors and integrin-mediated cell anchorage in the control of cell growth and differentiation: JULIANO **18**, 911.
Adipose tissue
Obesity genes and the regulation of body fat content: WEIGLE AND KUIJPER **18**, 867.
Age mutations
Invertebrate gerontology: the age mutations of *Caenorhabditis elegans*: LITHGOW **18**, 809.
Age-associated disease
The urgency of research on ageing: HOLLIDAY **18**, 89.
Age-related disease
Human senescence: KIRKWOOD **18**, 1009.
Aging
Aging mechanisms in fruit flies: TOWER **18**, 799.
Endless quest: HOLLIDAY **18**, 3.
Mitochondrial genetics and human disease: GROSSMAN AND SHOUBRIDGE **18**, 983.
Aging gene expression
Aging mechanisms in fruit flies: TOWER **18**, 799.
Agrin
Signaling mechanisms mediating synapse formation: WALLACE **18**, 777.
Airway epithelial cells
Epithelial integrins: SHEPPARD **18**, 655.
Allelic gene conversion
Meiotic recombination: a mechanism for tracking and eliminating mutations?: MCKEE **18**, 411.
Amphioxus
Retinoic acid, HOX genes and the anterior-posterior axis in chordates: SHIMELD **18**, 613.
Angiogenesis
The role of thrombospondin-1 in tumor progression and angiogenesis: TUSZYNSKI AND NICOSIA **18**, 71.
Animal models
Mouse models of human genetic disease: which mouse is more like a man?: ERICKSON **18**, 993.
Antagonistic pleiotropy
Aging mechanisms in fruit flies: TOWER **18**, 799.
Antibiotic
Antibiotic resistance: origins, evolution and spread: WILKINS **18**, 847.
Antiinflammation
Molecular mechanisms of anti-inflammatory action of glucocorticoids: CATO AND WADE **18**, 371.
Antirrhinum
Two is company: the complex travel arrangements of floral homeotic factors: DAVIES **18**, 863.
AP-2
Craniofacial defects in AP-2 null mutant mice: MORRISS-KAY **18**, 785.
Apoptosis
Epithelial integrins: SHEPPARD **18**, 655.
Signalling to p53: where does it all start?: KASTAN **18**, 617.
Arabidopsis
Two is company: the complex travel arrangements of floral homeotic factors: DAVIES **18**, 863.
Arabidopsis thaliana
A role for transcriptional repression during light control of plant development: VON ARNIM AND DENG **18**, 905.
Architectural proteins
Chromatin architectural proteins and transcription factors: a structural connection: VAN HOLDE AND ZLATANOVA **18**, 697.
Aromatase
Temperature variation and sex determination in reptiles: PIEAU **18**, 19.
Ascaris
Chromatin diminution in nematodes: MÜLLER, BERNARD AND TOBLER **18**, 133.
Ascidian
Retinoic acid, HOX genes and the anterior-posterior axis in chordates: SHIMELD **18**, 613.
Astacin family
BMP-1 and the astacin family of metalloproteinases: a potential link between the extracellular matrix, growth factors and pattern formation: SARRAS JR **18**, 439.
Asymmetry
Asymmetry – where evolutionary and developmental genetics meet: BATTERHAM, DAVIES, GAME AND MCKENZIE **18**, 841.
Atherosclerosis
Multiple growth factors are associated with lesions of atherosclerosis: specificity or redundancy?: RAINES AND ROSS **18**, 271.
Atomic force microscopy (AFM)
Striving for atomic resolution in biomolecular topography: the scanning force microscope (SFM): SCHAPER AND JOVIN **18**, 925.
Australopithecus
Human evolution: WOOD **18**, 945.
Auxin
DNA elements responsive to auxin: ABEL, BALLAS, WONG AND THEOLOGIS **18**, 647.
Axonal scaffolds
Common ground plans in early brain development in mice and flies: ARENDT AND NÜBLER-JUNG **18**, 255.
B chromosomes
Is the Y chromosome of *Drosophila* an evolved supernumerary chromosome?: HACKSTEIN, HOCHSTENBACH, HAUSCHTECK-JUNGEN AND BEUKEBOOM **18**, 317.
Bacillus megaterium
Adventures with *Bacillus megaterium* – fusion of bacterial protoplasts: ALFÖLDI **18**, 77.
Bacillus subtilis
The mechanism of bacterial asymmetric cell division: WAY **18**, 99.
Bacteria
Antibiotic resistance: origins, evolution and spread: WILKINS **18**, 847.
Basal transcription factor
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
Base-pair stacking interactions
Sequence-dependent DNA structure: HUNTER **18**, 157.
Basement membranes
Supramolecular assembly of basement membranes: TIMPL AND BROWN **18**, 123.
Beta-sheet
The structural puzzle of how serpin serine proteinase inhibitors work: WRIGHT **18**, 453.
Biogenesis
The biogenesis of lysosomes: is it a kiss and run, continuous fusion and fission process?: STORRIE AND DESJARDINS **18**, 895.
Birth defects
Analysing human developmental abnormalities: WINTER **18**, 965.
Bithorax complex
How do single homeotic genes control multiple segment identities?: DUNCAN **18**, 91.
Blastomere
Pattern formation: regional specification in the early *C. elegans* embryo: SCHNABEL **18**, 591.
Bloom syndrome
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
Body plan evolution
Dorsoventral axis inversion: a phylogenetic perspective: LACALLI **18**, 251.
Brain development
Common ground plans in early brain development in mice and flies: ARENDT AND NÜBLER-JUNG **18**, 255.
Bristle number
The nature of quantitative genetic variation revisited: lessons from *Drosophila* bristles: MACKAY **18**, 113.
Broad-Complex (BR-C)
Drosophila Sgs genes: stage and tissue specificity of hormone responsiveness: LEHMANN **18**, 47.
Bruton's tyrosine kinase (Btk)
X-linked agammaglobulinemia (XLA): a genetic tyrosine kinase (Btk) disease: MATTSSON, VIHINEN AND SMITH **18**, 825.
C-value
Simple sequences and the expanding genome: HANCOCK **18**, 421.
C. elegans
Control and integration of cell signaling pathways during *C. elegans* vulval development: SUNDARAM AND HAN **18**, 473.
Hierarchical guidance cues in the developing nervous system of *C. elegans*:

© ICSU Press 1996 pp. 1047–1057

WADSWORTH AND HEDGECOCK **18**, 355.
Invertebrate gerontology: the age mutations of *Caenorhabditis elegans*: LITHGOW **18**, 809.
Pattern formation: regional specification in the early *C. elegans* embryo: SCHNABEL **18**, 591.
The role of chromosome ends during meiosis in *Caenorhabditis elegans*: WICKY AND ROSE **18**, 447.
Touch sensation in *Caenorhabditis elegans*: HERMAN **18**, 199.

CAC
CAC – the neglected repeat: SERTEDAKI AND LINDSAY **18**, 237.

Cadherin
Adherens junctions in the *Drosophila* embryo: the role of E-cadherin in their establishment and morphogenetic function: KNUST AND LEPTIN **18**, 609.

CAM homology domain
Promiscuity of fibroblast growth factor receptors: GREEN, WALSH AND DOHERTY **18**, 639.

Cancer
The role of thrombospondin-1 in tumor progression and angiogenesis: TUSZYNSKI AND NICOSIA **18**, 71.
The role of thymidylate synthase as an RNA binding protein: CHU **18**, 191.

Candidate loci
The nature of quantitative genetic variation revisited: lessons from *Drosophila* bristles: MACKAY **18**, 113.

Cardiac development
Involvement of the neuregulins and their receptors in cardiac and neural development: CARRAWAY III **18**, 263.

Catenin
Adherens junctions in the *Drosophila* embryo: the role of E-cadherin in their establishment and morphogenetic function: KNUST AND LEPTIN **18**, 609.

Cdc6
Cdc6 and DNA replication: limited to humble origins: HEICHMAN **18**, 859.

Cell adhesion
Adherens junctions in the *Drosophila* embryo: the role of E-cadherin in their establishment and morphogenetic function: KNUST AND LEPTIN **18**, 609.

Cell cycle
Cdc6 and DNA replication: limited to humble origins: HEICHMAN **18**, 859.
Deregulation of protein synthesis as a mechanism of neoplastic transformation: ROSENWALD **18**, 243.
Happenstance, circumstance or enemy action: Cyclin D1 in breast, eye and brain: SCHMIDT **18**, 6.
Molecular analysis of Fanconi anaemia: DIGWEED AND SPERLING **18**, 579.
Nuclear transplantation in mammals: remodelling of transplanted nuclei under the influence of maturation promoting factor: FULKA, JR, FIRST AND MOOR, **18**, 835.
Src and the control of cell division: TAYLOR AND SHALLOWAY **18**, 9.
The role of MCM proteins in the cell cycle control of genome duplication: KEARSEY, MAIORANO, HOLMES AND TODOROV **18**, 183.
Transcriptional regulation of the dihydrofolate reductase gene: SLANSKY AND FARNHAM **18**, 55.

Cell cycle control
Signalling to p53: where does it all start?: KASTAN **18**, 617.

Cell cycle regulation
The small nuclear GTPase Ran: how much does it run?: RUSH, DRIVAS AND D'EUSTACHIO **18**, 103.

Cell differentiation
Modeling and simulation of metabolic pathways, gene regulation and cell differentiation: HOFESTÄDT, MAVROVOUNIOTIS, COLLADO-VIDES AND LÖFFLER **18**, 333.
The vagaries of variegating transgenes: MARTIN AND WHITELAW **18**, 919.

Cell division
Src and the control of cell division: TAYLOR AND SHALLOWAY **18**, 9.

Cell fusion
Adventures with *Bacillus megaterium* – fusion of bacterial protoplasts: ALFÖLDI **18**, 77.

Cell lineages
Genes, cellular interactions and cell lineages in the determination of plant trichome spacing: SACHS **18**, 443.

Cell migration
Hierarchical guidance cues in the developing nervous system of *C. elegans*: WADSWORTH AND HEDGECOCK **18**, 355.

Cell motility
Myosin II function in non-muscle cells: MACIVER **18**, 179.

Cell proliferation
Cell proliferation control in Drosophila: flies are not worms: BRYANT **18**, 781.

Cell shape
Myosin II function in non-muscle cells: MACIVER **18**, 179.

Cell signalling
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
The Rho GTPase regulates protein kinase activity: NAGATA AND HALL **18**, 529.

Cell spreading
Myosin II function in non-muscle cells: MACIVER **18**, 179.

Cell-cell communication
The cellular internet: on-line with connexins: BRUZZONE, WHITE AND GOODENOUGH **18**, 709.

Cell-cell interactions
Pattern formation: regional specification in the early *C. elegans* embryo: SCHNABEL **18**, 591.

Channel
The cellular internet: on-line with connexins: BRUZZONE, WHITE AND GOODENOUGH **18**, 709.

Charcot-Marie-Tooth
The cellular internet: on-line with connexins: BRUZZONE, WHITE AND GOODENOUGH **18**, 709.

Chemotherapy
DNA filter elution: a window on DNA damage in mammalian cells: KOHN **18**, 505.
The role of thymidylate synthase as an RNA binding protein: CHU **18**, 191.

China
Beijing and the 18th International Congress of Genetics: dilemmas and opportunities: WILKINS **18**, 433.

Chloroplast genes
Green life: control of chloroplast gene expression: LINK **18**, 465.

Chordate evolution
Common ground plans in early brain development in mice and flies: ARENDT AND NÜBLER-JUNG **18**, 255.

Chromatin
Chromatin architectural proteins and transcription factors: a structural connection: VAN HOLDE AND ZLATANOVA **18**, 697.
The vagaries of variegating transgenes: MARTIN AND WHITELAW **18**, 919.

Chromatin diminution
Chromatin diminution in nematodes: MÜLLER, BERNARD AND TOBLER **18**, 133.

Chromatin organizer
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.

Chromatin remodeling
Remodeling chromatin structures for transcription: what happens to the histones?: STEGER AND WORKMAN **18**, 875.

Chromosome condensation
Nuclear transplantation in mammals: remodelling of transplanted nuclei under the influence of maturation promoting factor: FULKA, JR, FIRST AND MOOR, **18**, 835.

Chromosome healing
Chromosome healing: spontaneous and programmed *de novo* telomere formation by telomerase: MELEK AND SHIPPEN **18**, 301.

Chromosome instability
Early studies on human chromosomes: HARNDEN **18**, 163.

Chromosome pairing
The role of chromosome ends during meiosis in *Caenorhabditis elegans*: WICKY AND ROSE **18**, 447.

Chromosome replication
Endless quest: HOLLIDAY **18**, 3.

Chromosome segregation
Holding chromatids together to ensure they go their separate ways: BICKEL AND ORR-WEAVER **18**, 293.

Clathrin adaptors
Intracellular trafficking of lysosomal membrane proteins: HUNZIKER AND GEUZE **18**, 379.

Clathrin-coated vesicles
Dynamin GTPase, a force-generating molecular switch: WARNOCK AND SCHMID **18**, 885.

Clone
Nuclear transplantation in mammals: remodelling of transplanted nuclei under the influence of maturation promoting factor: FULKA, JR, FIRST AND MOOR, **18**, 835.

Cockayne syndrome
Cockayne syndrome – a primary defect in DNA repair, transcription, both or neither?: FRIEDBERG **18**, 731.
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.

Collagen
Supramolecular assembly of basement membranes: TIMPL AND BROWN **18**, 123.

Comparative embryology
Common ground plans in early brain development in mice and flies: ARENDT AND NÜBLER-JUNG **18**, 255.

Compartment boundaries
Controlling growth of the wing: Vestigial

integrates signals from the compartment boundaries: COHEN **18**, 855.
Computer modeling
Modeling and simulation of metabolic pathways, gene regulation and cell differentiation: HOFESTÄDT, MAVROVOUNIOTIS, COLLADO-VIDES AND LÖFFLER **18**, 333.
Computer modelling
Sequence-dependent DNA structure: HUNTER **18**, 157.
Conductance channels
Connexins in mammalian heart function: GROS AND JONGSMA **18**, 719.
Conformational change
Dynamin GTPase, a force-generating molecular switch: WARNOCK AND SCHMID **18**, 885.
Connexins
Connexins in mammalian heart function: GROS AND JONGSMA **18**, 719.
Connexon
The cellular internet: on-line with connexins: BRUZZONE, WHITE AND GOODENOUGH **18**, 709.
Constitutive transcription
Cooperative relaxation of supercoils and periodic transcriptional initiation within polymerase batteries: GUPTASARMA **18**, 325.
Convergent evolution
A case of convergent evolution of nucleic acid binding modules: GRAUMANN AND MARAHIEL **18**, 309.
Copidosoma floridanum
Segmentation (and *eve*) in very odd insect embryos: FRENCH **18**, 435.
Corticosteroids
Molecular mechanisms of anti-inflammatory action of glucocorticoids: CATO AND WADE **18**, 371.
Crosslinks
DNA filter elution: a window on DNA damage in mammalian cells: KOHN **18**, 505.
Crystallins
Lens development and crystallin gene expression: many roles for Pax-6: CVEKL AND PIATIGORSKY **18**, 621.
CSD proteins
A case of convergent evolution of nucleic acid binding modules: GRAUMANN AND MARAHIEL **18**, 309.
Cultured fibroblasts
Early studies on human chromosomes: HARNDEN **18**, 163.
Cyclin D1
Happenstance, circumstance or enemy action: Cyclin D1 in breast, eye and brain: SCHMIDT **18**, 6.
Cyclin-dependent kinases
Cdc6 and DNA replication: limited to humble origins: HEICHMAN **18**, 859.
Cytogenetics
Early studies on human chromosomes: HARNDEN **18**, 163.
Cytokines
Multiple growth factors are associated with lesions of atherosclerosis: specificity or redundancy?: RAINES AND ROSS **18**, 271.
Cytokinesis
Myosin II function in non-muscle cells: MACIVER **18**, 179.
Cytokinin
Cytokinins in plant senescence: from spray and pray to clone and play: GAN AND AMASINO **18**, 557.
Cytoplasmic protein tyrosine kinase
X-linked agammaglobulinemia (XLA): a genetic tyrosine kinase (Btk) disease: MATTSSON, VIHINEN AND SMITH **18**, 825.
Darwin
Are there 'Kuhnian' revolutions in biology?: WILKINS **18**, 695.
Defense genes
Systemin – a polypeptide defense signal in plants: SCHALLER AND RYAN **18**, 27.
Degenerative diseases
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
Degenerins
Touch sensation in *Caenorhabditis elegans*: HERMAN **18**, 199.
Deuterostome
Dorsoventral axis inversion: a phylogenetic perspective: LACALLI **18**, 251.
Development
A new role for the stromal cells in kidney development: BARD **18**, 705.
Asymmetry – where evolutionary and developmental genetics meet: BATTERHAM, DAVIES, GAME AND MCKENZIE **18**, 841.
BMP-1 and the astacin family of metalloproteinases: a potential link between the extracellular matrix, growth factors and pattern formation: SARRAS JR **18**, 439.
Craniofacial defects in AP-2 null mutant mice: MORRISS-KAY **18**, 785.
Pattern formation: regional specification in the early *C. elegans* embryo: SCHNABEL **18**, 591.
Tadpole competence and tissue-specific temporal regulation of amphibian metamorphosis: roles of thyroid hormone and its receptors: SHI, WONG, PUZIANOWSKA-KUZNICKA AND STOLOW **18**, 391.
The world of genome projects: BRENNER **18**, 1039.
Developmental genetics
Developmental genetics and traditional homology: BOLKER AND RAFF **18**, 489.
Developmental mutants
Genes, cellular interactions and cell lineages in the determination of plant trichome spacing: SACHS **18**, 443.
Differentiation
Cooperation between soluble factors and integrin-mediated cell anchorage in the control of cell growth and differentiation: JULIANO **18**, 911.
Dihydrofolate reductase (DHFR)
Transcriptional regulation of the dihydrofolate reductase gene: SLANSKY AND FARNHAM **18**, 55.
Disease
EST! EST!! EST!!!: HARTL **18**, 1021.
Human physiology in space: VERNIKOS **18**, 1029.
Human somatic cell gene therapy: BANK **18**, 999.
The world of genome projects: BRENNER **18**, 1039.
DNA
DNA filter elution: a window on DNA damage in mammalian cells: KOHN **18**, 505.
Electric fields at the nuclear membrane?: MATZKE AND MATZKE **18**, 849.
Sequence-dependent DNA structure: HUNTER **18**, 157.
DNA biosynthesis
The role of thymidylate synthase as an RNA binding protein: CHU **18**, 191.
DNA chip
Genome analysis with gene expression microarrays: SCHENA **18**, 427.
DNA damage
DNA filter elution: a window on DNA damage in mammalian cells: KOHN **18**, 505.
DNA free energy
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.
DNA gyrase
Molecular mechanisms of drug inhibition of DNA gyrase: LEWIS, TSAI AND WIGLEY **18**, 661.
DNA methylation
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
DNA protein interaction
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.
DNA recognition
Chromosome healing: spontaneous and programmed *de novo* telomere formation by telomerase: MELEK AND SHIPPEN **18**, 301.
DNA repair
Cockayne syndrome – a primary defect in DNA repair, transcription, both or neither?: FRIEDBERG **18**, 731.
Early studies on human chromosomes: HARNDEN **18**, 163.
Molecular analysis of Fanconi anaemia: DIGWEED AND SPERLING **18**, 579.
Moths, myths and mysteries of stress resistance: KOVAL **18**, 149.
UV damage and repair mechanisms in mammalian cells: TORNALETTI AND PFEIFER **18**, 221.
DNA replication
Cdc6 and DNA replication: limited to humble origins: HEICHMAN **18**, 859.
DNA rotational information
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.
DNA sequencing
The world of genome projects: BRENNER **18**, 1039.
DNA structure
It's the genes! EST access to human genome content: GERHOLD AND CASKEY **18**, 973.
Sequence-dependent DNA structure: HUNTER **18**, 157.
DNA supercoiling
Cooperative relaxation of supercoils and periodic transcriptional initiation within polymerase batteries: GUPTASARMA **18**, 325.
DNA topoisomerase 1
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.
DNA topoisomerases
DNA filter elution: a window on DNA damage in mammalian cells: KOHN **18**, 505.
DNA topology
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.

DNA transcription
Cockayne syndrome – a primary defect in DNA repair, transcription, both or neither?: FRIEDBERG **18**, 731.
DNA transformation
Moths, myths and mysteries of stress resistance: KOVAL **18**, 149.
DNA-dependent RNA polymerase
Green life: control of chloroplast gene expression: LINK **18**, 465.
Dopamine transporter
Epigenic factors and midbrain dopaminergic neurone development: PERRONE-CAPANO AND DI PORZIO **18**, 817.
Dorsoventral axis
Common ground plans in early brain development in mice and flies: ARENDT AND NÜBLER-JUNG **18**, 255.
Dorsoventral axis inversion: a phylogenetic perspective: LACALLI **18**, 251.
Dosage compensation
Dosage compensation in *Drosophila* and the 'complex' world of transcriptional regulation: LUCCHESI **18**, 541.
Double-strand end repair
Unraveling the late stages of recombinational repair: metabolism of DNA junctions in *Escherichia coli*: KUZMINOV **18**, 757.
Drosophila
Adherens junctions in the *Drosophila* embryo: the role of E-cadherin in their establishment and morphogenetic function: KNUST AND LEPTIN **18**, 609.
Aging mechanisms in fruit flies: TOWER **18**, 799.
Cell proliferation control in Drosophila: flies are not worms: BRYANT **18**, 781.
Controlling growth of the wing: Vestigial integrates signals from the compartment boundaries: COHEN **18**, 855.
Dosage compensation in *Drosophila* and the 'complex' world of transcriptional regulation: LUCCHESI **18**, 541.
Dosage-dependent modification of position-effect variegation in *Drosophila*: HENIKOFF **18**, 401.
EST! EST!! EST!!!: HARTL **18**, 1021.
How do single homeotic genes control multiple segment identities?: DUNCAN **18**, 91.
Is the Y chromosome of *Drosophila* an evolved supernumerary chromosome?: HACKSTEIN, HOCHSTENBACH, HAUSCHTECK-JUNGEN AND BEUKEBOOM **18**, 317.
Segmentation (and *eve*) in very odd insect embryos: FRENCH **18**, 435.
The nature of quantitative genetic variation revisited: lessons from *Drosophila* bristles: MACKAY **18**, 113.
Drug inhibition
Molecular mechanisms of drug inhibition of DNA gyrase: LEWIS, TSAI AND WIGLEY **18**, 661.
Dwarf
Regulation of sex determination in maize: IRISH **18**, 363.
Dynamin
Dynamin GTPase, a force-generating molecular switch: WARNOCK AND SCHMID **18**, 885.
Dysmorphic syndromes
Analysing human developmental abnormalities: WINTER **18**, 965.
E2F
Transcriptional regulation of the dihydrofolate reductase gene: SLANSKY AND FARNHAM **18**, 55.
E74
Drosophila Sgs genes: stage and tissue specificity of hormone responsiveness: LEHMANN **18**, 47.
Early auxin-inducible genes
DNA elements responsive to auxin: ABEL, BALLAS, WONG AND THEOLOGIS **18**, 647.
Earth
Evolution of hydrothermal ecosystems on earth (and Mars?): GILLINGS **18**, 515.
Ecdysone
Drosophila Sgs genes: stage and tissue specificity of hormone responsiveness: LEHMANN **18**, 47.
Electric fields
Electric fields at the nuclear membrane?: MATZKE AND MATZKE **18**, 849.
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
Embryogenesis
Kuhnian revolutions in developmental biology: BARD **18**, 937.
Pattern formation: regional specification in the early *C. elegans* embryo: SCHNABEL **18**, 591.
Embryonic development
Epigenic factors and midbrain dopaminergic neurone development: PERRONE-CAPANO AND DI PORZIO **18**, 817.
Embryonic polarity
Segmentation (and *eve*) in very odd insect embryos: FRENCH **18**, 435.
Embryonic stem cell 'knockouts'
Mouse models of human genetic disease: which mouse is more like a man?: ERICKSON **18**, 993.
Endocytosis
Intracellular trafficking of lysosomal membrane proteins: HUNZIKER AND GEUZE **18**, 379.
Endosymbiotic gene transfer
Is something wrong with the tree of life?: MARTIN **18**, 523.
Energy expenditure
Obesity genes and the regulation of body fat content: WEIGLE AND KUIJPER **18**, 867.
Energy metabolism
Mitochondrial genetics and human disease: GROSSMAN AND SHOUBRIDGE **18**, 983.
Enzyme structure
A new lease of life for an old enzyme: MARTINI AND URSINI **18**, 631.
Epidemiology
Antibiotic resistance: origins, evolution and spread: WILKINS **18**, 847.
Epistasis
Mouse models of human genetic disease: which mouse is more like a man?: ERICKSON **18**, 993.
Epithelial morphogenesis
Adherens junctions in the *Drosophila* embryo: the role of E-cadherin in their establishment and morphogenetic function: KNUST AND LEPTIN **18**, 609.
Epithelial polarity
Adherens junctions in the *Drosophila* embryo: the role of E-cadherin in their establishment and morphogenetic function: KNUST AND LEPTIN **18**, 609.
ErbB receptors
Involvement of the neuregulins and their receptors in cardiac and neural development: CARRAWAY III **18**, 263.
Escherichia coli
recA mutants of *E. coli* K12: a personal turning point: CLARK **18**, 767.
Estrogens
Temperature variation and sex determination in reptiles: PIEAU **18**, 19.
Ethics
The new scientific spirit: LAVELLE AND D'ARI **18**, 603.
Eukaryotes
hnRNP particles: SAMARINA **18**, 595.
The pleckstrin homology domain: an intriguing multifunctional protein module: SHAW **18**, 35.
The role of MCM proteins in the cell cycle control of genome duplication: KEARSEY, MAIORANO, HOLMES AND TODOROV **18**, 183.
Eukaryotic gene repression
A role for transcriptional repression during light control of plant development: VON ARNIM AND DENG **18**, 905.
Euphenics
At mid-point in the molecular revolution: NEEL **18**, 943.
Evolution
Another nail in the coffin of the multiple-origins theory?: WILLS **18**, 1017.
Antibiotic resistance: origins, evolution and spread: WILKINS **18**, 847.
Is the Y chromosome of *Drosophila* an evolved supernumerary chromosome?: HACKSTEIN, HOCHSTENBACH, HAUSCHTECK-JUNGEN AND BEUKEBOOM **18**, 317.
Human evolution: WOOD **18**, 945.
Human senescence: KIRKWOOD **18**, 1009.
Is something wrong with the tree of life?: MARTIN **18**, 523.
Plant cell enlargement and the action of expansins: COSGROVE **18**, 533.
Segmentation (and *eve*) in very odd insect embryos: FRENCH **18**, 435.
The world of genome projects: BRENNER **18**, 1039.
Unusual evolution of 11β- and 17β-hydroxysteroid and retinol dehydrogenases: BAKER **18**, 63.
Expansins
Plant cell enlargement and the action of expansins: COSGROVE **18**, 533.
Expressed sequence tag (EST)
EST! EST!! EST!!!: HARTL **18**, 1021.
It's the genes! EST access to human genome content: GERHOLD AND CASKEY **18**, 973.
Serial analysis of gene expression: ESTs get smaller: ADAMS **18**, 261.
Eye development
Lens development and crystallin gene expression: many roles for Pax-6: CVEKL AND PIATIGORSKY **18**, 621.
Fanconi anaemia
Molecular analysis of Fanconi anaemia: DIGWEED AND SPERLING **18**, 579.
Feeding regulation
Obesity genes and the regulation of body fat content: WEIGLE AND KUIJPER **18**, 867.
[Fe-S] clusters
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Fibroblast growth factors
Promiscuity of fibroblast growth factor

receptors: GREEN, WALSH AND DOHERTY **18**, 639.
Flower development
Regulation of sex determination in maize: IRISH **18**, 363.
Two is company: the complex travel arrangements of floral homeotic factors: DAVIES **18**, 863.
Fossil evidence
Is something wrong with the tree of life?: MARTIN **18**, 523.
Functional convergence
Unusual evolution of 11β- and 17β-hydroxysteroid and retinol dehydrogenases: BAKER **18**, 63.
Functional proteins
Chromatin architectural proteins and transcription factors: a structural connection: VAN HOLDE AND ZLATANOVA **18**, 697.
Funding
Do universities do too much research?: BARD **18**, 1.
G6PD deficiency
A new lease of life for an old enzyme: MARTINI AND URSINI **18**, 631.
Gap junction
Connexins in mammalian heart function: GROS AND JONGSMA **18**, 719.
The cellular internet: on-line with connexins: BRUZZONE, WHITE AND GOODENOUGH **18**, 709.
GC content
Genomic evolution in mice and men: imprinted genes have little intronic content: HURST **18**, 773.
Gene
It's the genes! EST access to human genome content: GERHOLD AND CASKEY **18**, 973.
Gene activation
Activation of mammalian gene expression by the UV component of sunlight – from models to reality: TYRRELL **18**, 139.
Gene descent
Is something wrong with the tree of life?: MARTIN **18**, 523.
Gene dosage
Myelin mutants: model systems for the study of normal and abnormal myelination: GRIFFITHS **18**, 789.
Unusual evolution of 11β- and 17β-hydroxysteroid and retinol dehydrogenases: BAKER **18**, 63.
Gene expression
Developmental genetics and traditional homology: BOLKER AND RAFF **18**, 489.
Genome analysis with gene expression microarrays: SCHENA **18**, 427.
Iron regulatory proteins 1 and 2: HENDERSON **18**, 739.
Serial analysis of gene expression: ESTs get smaller: ADAMS **18**, 261.
Gene knockout
A new role for the stromal cells in kidney development: BARD **18**, 705.
Gene rearrangement
Antigenic variation in trypanosomes: secrets surface slowly: CROSS **18**, 283.
Gene regulation
Modeling and simulation of metabolic pathways, gene regulation and cell differentiation: HOFESTÄDT, MAVROVOUNIOTIS, COLLADO-VIDES AND LÖFFLER **18**, 333.
Drosophila Sgs genes: stage and tissue specificity of hormone responsiveness: LEHMANN **18**, 47.
Gene therapy
Human somatic cell gene therapy: BANK **18**, 999.
Gene transcription
Antigenic variation in trypanosomes: secrets surface slowly: CROSS **18**, 283.
Gene transfer
Human somatic cell gene therapy: BANK **18**, 999.
Genetics
Beijing and the 18th International Congress of Genetics: dilemmas and opportunities: WILKINS **18**, 433.
Genetics of lifespan
Human senescence: KIRKWOOD **18**, 1009.
Genome
It's the genes! EST access to human genome content: GERHOLD AND CASKEY **18**, 973.
Genome duplication
The role of MCM proteins in the cell cycle control of genome duplication: KEARSEY, MAIORANO, HOLMES AND TODOROV **18**, 183.
Genome evolution
Simple sequences and the expanding genome: HANCOCK **18**, 421.
Genome rearrangement
Chromatin diminution in nematodes: MÜLLER, BERNARD AND TOBLER **18**, 133.
Genome research
The world of genome projects: BRENNER **18**, 1039.
Genomic imprinting
Genomic evolution in mice and men: imprinted genes have little intronic content: HURST **18**, 773.
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
Genomics
Genome analysis with gene expression microarrays: SCHENA **18**, 427.
Germ line
Chromatin diminution in nematodes: MÜLLER, BERNARD AND TOBLER **18**, 133.
Gerontology
Invertebrate gerontology: the age mutations of *Caenorhabditis elegans*: LITHGOW **18**, 809.
The urgency of research on ageing: HOLLIDAY **18**, 89.
GFAP
Dynamic property of intermediate filaments: regulation by phosphorylation: INAGAKI, MATSUOKA, TSUJIMURA, ANDO, TOKUI, TAKAHASHI AND INAGAKI **18**, 481.
Gibberellin
Regulation of sex determination in maize: IRISH **18**, 363.
Glucocorticoid receptor
Molecular mechanisms of anti-inflammatory action of glucocorticoids: CATO AND WADE **18**, 371.
Glucose 6-phosphate dehydrogenase
A new lease of life for an old enzyme: MARTINI AND URSINI **18**, 631.
Glutamine expansion
Expanded glutamines and neurodegeneration – a gain of insight: BATES **18**, 175.
Golgi
Intracellular trafficking of lysosomal membrane proteins: HUNZIKER AND GEUZE **18**, 379.
Gonadal development
Sex determination in humans: SCHAFER AND GOODFELLOW **18**, 955.
goosecoid
The organizer formation: two molecules are better than one: LOMBARDO **18**, 267.
Growth
Happenstance, circumstance or enemy action: Cyclin D1 in breast, eye and brain: SCHMIDT **18**, 6.
Growth factors
Cooperation between soluble factors and integrin-mediated cell anchorage in the control of cell growth and differentiation: JULIANO **18**, 911.
Multiple growth factors are associated with lesions of atherosclerosis: specificity or redundancy?: RAINES AND ROSS **18**, 271.
GTP hydrolysis
Dynamin GTPase, a force-generating molecular switch: WARNOCK AND SCHMID **18**, 885.
Hayflick limit
Endless quest: HOLLIDAY **18**, 3.
Health care
The urgency of research on ageing: HOLLIDAY **18**, 89.
Heart
Trabeculation in the embryonic heart: SEDMERA AND THOMAS **18**, 607.
Heat stress
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
Heparan sulphate proteoglycans
Promiscuity of fibroblast growth factor receptors: GREEN, WALSH AND DOHERTY **18**, 639.
Hepatocyte couplets
Polarised membrane traffic in hepatocytes: WILTON AND MATTHEWS **18**, 229.
Heritable disease
It's the genes! EST access to human genome content: GERHOLD AND CASKEY **18**, 973.
Heterochromatin
Is the Y chromosome of *Drosophila* an evolved supernumerary chromosome?: HACKSTEIN, HOCHSTENBACH, HAUSCHTECK-JUNGEN AND BEUKEBOOM **18**, 317.
Heterogeneous nuclear ribonucleoproteins
The roles of heterogeneous nuclear ribonucleoproteins (hnRNP) in RNA metabolism: WEIGHARDT, BIAMONTI AND RIVA **18**, 747.
Histone
Remodeling chromatin structures for transcription: what happens to the histones?: STEGER AND WORKMAN **18**, 875.
Histone-like octamer
Chromatin architectural proteins and transcription factors: a structural connection: VAN HOLDE AND ZLATANOVA **18**, 697.
hnRNA
hnRNP particles: SAMARINA **18**, 595.
Holliday junction
Unraveling the late stages of recombinational repair: metabolism of DNA junctions in *Escherichia coli*: KUZMINOV **18**, 757.
Homeobox genes
The coming of age of ventralising homeobox genes in amphibian development: LEMAIRE **18**, 701.
Homeodomain
Lens development and crystallin gene expression: many roles for Pax-6: CVEKL AND PIATIGORSKY **18**, 621.

Homeotic gene
How do single homeotic genes control multiple segment identities?: DUNCAN **18**, 91.
Two is company: the complex travel arrangements of floral homeotic factors: DAVIES **18**, 863.
Hominid
Another nail in the coffin of the multiple-origins theory?: WILLS **18**, 1017.
Human evolution: WOOD **18**, 945.
Homology
Developmental genetics and traditional homology: BOLKER AND RAFF **18**, 489.
HOX genes
Retinoic acid, HOX genes and the anterior-posterior axis in chordates: SHIMELD **18**, 613.
***Hox* genes**
Sticky fingers: *Hox* genes and cell adhesion in vertebrate limb development: NEWMAN **18**, 171.
Human
Analysing human developmental abnormalities: WINTER **18**, 965.
Another nail in the coffin of the multiple-origins theory?: WILLS **18**, 1017.
EST! EST!! EST!!!: HARTL **18**, 1021.
Human evolution: WOOD **18**, 945.
Human senescence: KIRKWOOD **18**, 1009.
Human somatic cell gene therapy: BANK **18**, 999.
It's the genes! EST access to human genome content: GERHOLD AND CASKEY **18**, 973.
Sex determination in humans: SCHAFER AND GOODFELLOW **18**, 955.
Human bone morphogenic protein-1 (BMP-1)
BMP-1 and the astacin family of metalloproteinases: a potential link between the extracellular matrix, growth factors and pattern formation: SARRAS JR **18**, 439.
Human chromosomes
Early studies on human chromosomes: HARNDEN **18**, 163.
Human genome
EST! EST!! EST!!!: HARTL **18**, 1021.
Genome analysis with gene expression microarrays: SCHENA **18**, 427.
The world of genome projects: BRENNER **18**, 1039.
Human physiology
Human physiology in space: VERNIKOS **18**, 1029.
Human rights
Beijing and the 18th International Congress of Genetics: dilemmas and opportunities: WILKINS **18**, 433.
Huntington's disease
Expanded glutamines and neurodegeneration – a gain of insight: BATES **18**, 175.
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
Hydrothermal ecosystems
Evolution of hydrothermal ecosystems on earth (and Mars?): GILLINGS **18**, 515.
Hydroxysteroid dehydrogenases
Unusual evolution of 11β- and 17β-hydroxysteroid and retinol dehydrogenases: BAKER **18**, 63.
Hypothalamus
Brain POU-er: SHARPE AND MORGAN **18**, 347.
Imaginal discs
Cell proliferation control in Drosophila: flies are not worms: BRYANT **18**, 781.
Immune evasion
Antigenic variation in trypanosomes: secrets surface slowly: CROSS **18**, 283.
Imprinted genes
Do imprinted genes have few and small introns?: HAIG **18**, 351.
Induced mutations
Mouse models of human genetic disease: which mouse is more like a man?: ERICKSON **18**, 993.
Inflammation
Epithelial integrins: SHEPPARD **18**, 655.
Inflammatory cytokines
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
Informosomes
hnRNP particles: SAMARINA **18**, 595.
Insecticide resistance
Asymmetry – where evolutionary and developmental genetics meet: BATTERHAM, DAVIES, GAME AND MCKENZIE **18**, 841.
Insects
Moths, myths and mysteries of stress resistance: KOVAL **18**, 149.
Integrins
Cooperation between soluble factors and integrin-mediated cell anchorage in the control of cell growth and differentiation: JULIANO **18**, 911.
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
Epithelial integrins: SHEPPARD **18**, 655.
Intron
Genomic evolution in mice and men: imprinted genes have little intronic content: HURST **18**, 773.
Introns
Do imprinted genes have few and small introns?: HAIG **18**, 351.
Ion channels
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
Touch sensation in *Caenorhabditis elegans*: HERMAN **18**, 199.
Ion currents
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
Iron metabolism
Iron regulatory proteins 1 and 2: HENDERSON **18**, 739.
Iron regulatory proteins
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Isochore
Genomic evolution in mice and men: imprinted genes have little intronic content: HURST **18**, 773.
Kidney
A new role for the stromal cells in kidney development: BARD **18**, 705.
Kinesins
Kinesin proteins: a phylum of motors for microtubule-based motility: MOORE AND ENDOW **18**, 207.
Kiss and run
The biogenesis of lysosomes: is it a kiss and run, continuous fusion and fission process?: STORRIE AND DESJARDINS **18**, 895.
Laminin
Supramolecular assembly of basement membranes: TIMPL AND BROWN **18**, 123.
Late endosome/prelysosome compartment
The biogenesis of lysosomes: is it a kiss and run, continuous fusion and fission process?: STORRIE AND DESJARDINS **18**, 895.
Leaf development
Cytokinins in plant senescence: from spray and pray to clone and play: GAN AND AMASINO **18**, 557.
Lens
Lens development and crystallin gene expression: many roles for Pax-6: CVEKL AND PIATIGORSKY **18**, 621.
Lepidopteran cells
Moths, myths and mysteries of stress resistance: KOVAL **18**, 149.
Lifespan
Invertebrate gerontology: the age mutations of *Caenorhabditis elegans*: LITHGOW **18**, 809.
The urgency of research on ageing: HOLLIDAY **18**, 89.
Light
A role for transcriptional repression during light control of plant development: VON ARNIM AND DENG **18**, 905.
Limb defects
Craniofacial defects in AP-2 null mutant mice: MORRISS-KAY **18**, 785.
Limb development
Sticky fingers: *Hox* genes and cell adhesion in vertebrate limb development: NEWMAN **18**, 171.
Lipid asymmetry
Polarised membrane traffic in hepatocytes: WILTON AND MATTHEWS **18**, 229.
Logic
The new scientific spirit: LAVELLE AND D'ARI **18**, 603.
Longevity
Human senescence: KIRKWOOD **18**, 1009.
Lucilia cuprina
Asymmetry – where evolutionary and developmental genetics meet: BATTERHAM, DAVIES, GAME AND MCKENZIE **18**, 841.
Lysosome
Intracellular trafficking of lysosomal membrane proteins: HUNZIKER AND GEUZE **18**, 379.
The biogenesis of lysosomes: is it a kiss and run, continuous fusion and fission process?: STORRIE AND DESJARDINS **18**, 895.
Malaria
A new lease of life for an old enzyme: MARTINI AND URSINI **18**, 631.
Male fertility genes
Is the Y chromosome of *Drosophila* an evolved supernumerary chromosome?: HACKSTEIN, HOCHSTENBACH, HAUSCHTECK-JUNGEN AND BEUKEBOOM **18**, 317.
Malformations
Analysing human developmental abnormalities: WINTER **18**, 965.
Mammalian heart
Connexins in mammalian heart function: GROS AND JONGSMA **18**, 719.
Mammals
Nuclear transplantation in mammals: remodelling of transplanted nuclei under the influence of maturation promoting factor: FULKA, JR, FIRST and MOOR, **18**, 835.

Mammary tissues
Happenstance, circumstance or enemy action: Cyclin D1 in breast, eye and brain: SCHMIDT **18**, 6.
MAP kinases
STATs and MAPKs: obligate or opportunistic partners in signaling: IHLE **18**, 95.
Mars
Evolution of hydrothermal ecosystems on earth (and Mars?): GILLINGS **18**, 515.
Mathematical modeling
Modeling and simulation of metabolic pathways, gene regulation and cell differentiation: HOFESTÄDT, MAVROVOUNIOTIS, COLLADO-VIDES AND LÖFFLER **18**, 333.
Maturation promoting factor (MPF)
Nuclear transplantation in mammals: remodelling of transplanted nuclei under the influence of maturation promoting factor: FULKA, JR, FIRST and MOOR, **18**, 835.
Mechanosensation
Touch sensation in *Caenorhabditis elegans*: HERMAN **18**, 199.
Meiosis
Holding chromatids together to ensure they go their separate ways: BICKEL AND ORR-WEAVER **18**, 293.
The role of chromosome ends during meiosis in *Caenorhabditis elegans*: WICKY AND ROSE **18**, 447.
Meiotic recombination
Meiotic recombination: a mechanism for tracking and eliminating mutations?: MCKEE **18**, 411.
Membrane
Electric fields at the nuclear membrane?: MATZKE AND MATZKE **18**, 849.
The biogenesis of lysosomes: is it a kiss and run, continuous fusion and fission process?: STORRIE AND DESJARDINS **18**, 895.
Membrane adhesion
Membrane adhesion and other functions for the myelin basic proteins: STAUGAITIS, COLMAN AND PEDRAZA **18**, 13.
Membrane localisation
The pleckstrin homology domain: an intriguing multifunctional protein module: SHAW **18**, 35.
Mesencephalon
Epigenic factors and midbrain dopaminergic neurone development: PERRONE-CAPANO AND DI PORZIO **18**, 817.
Mesenchyme
Sticky fingers: *Hox* genes and cell adhesion in vertebrate limb development: NEWMAN **18**, 171.
Mesoderm induction
The organizer formation: two molecules are better than one: LOMBARDO **18**, 267.
Metabolic pathway
Modeling and simulation of metabolic pathways, gene regulation and cell differentiation: HOFESTÄDT, MAVROVOUNIOTIS, COLLADO-VIDES AND LÖFFLER **18**, 333.
Metalloproteinases
BMP-1 and the astacin family of metalloproteinases: a potential link between the extracellular matrix, growth factors and pattern formation: SARRAS JR **18**, 439.
Metalloregulatory proteins
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Metamorphosis
Tadpole competence and tissue-specific temporal regulation of amphibian metamorphosis: roles of thyroid hormone and its receptors: SHI, WONG, PUZIANOWSKA-KUZNICKA AND STOLOW **18**, 391.
Microarray
Genome analysis with gene expression microarrays: SCHENA **18**, 427.
Microgravity
Human physiology in space: VERNIKOS **18**, 1029.
Microsatellite
CAC – the neglected repeat: SERTEDAKI AND LINDSAY **18**, 237.
Simple sequences and the expanding genome: HANCOCK **18**, 421.
Microtubules
Kinesin proteins: a phylum of motors for microtubule-based motility: MOORE AND ENDOW **18**, 207.
Migration
Another nail in the coffin of the multiple-origins theory?: WILLS **18**, 1017.
Minichromosome maintenance (MCM) protein
The role of MCM proteins in the cell cycle control of genome duplication: KEARSEY, MAIORANO, HOLMES AND TODOROV **18**, 183.
Minisatellite
Another nail in the coffin of the multiple-origins theory?: WILLS **18**, 1017.
CAC – the neglected repeat: SERTEDAKI AND LINDSAY **18**, 237.
Mitochondria
Mitochondrial genetics and human disease: GROSSMAN AND SHOUBRIDGE **18**, 983.
Mitogenesis
Cooperation between soluble factors and integrin-mediated cell anchorage in the control of cell growth and differentiation: JULIANO **18**, 911.
Mitosis
Cell proliferation control in Drosophila: flies are not worms: BRYANT **18**, 781.
Holding chromatids together to ensure they go their separate ways: BICKEL AND ORR-WEAVER **18**, 293.
Src and the control of cell division: TAYLOR AND SHALLOWAY **18**, 9.
Modifier genes
Mouse models of human genetic disease: which mouse is more like a man?: ERICKSON **18**, 993.
Modular promoters
DNA elements responsive to auxin: ABEL, BALLAS, WONG AND THEOLOGIS **18**, 647.
Molecular biology
Are there 'Kuhnian' revolutions in biology?: WILKINS **18**, 695.
Molecular clock
Is something wrong with the tree of life?: MARTIN **18**, 523.
Molecular coevolution
Simple sequences and the expanding genome: HANCOCK **18**, 421.
Molecular disease
The roles of heterogeneous nuclear ribonucleoproteins (hnRNP) in RNA metabolism: WEIGHARDT, BIAMONTI AND RIVA **18**, 747.
Molecular motors
Kinesin proteins: a phylum of motors for microtubule-based motility: MOORE AND ENDOW **18**, 207.
Molecular revolution
At mid-point in the molecular revolution: NEEL **18**, 943.
Morphogenesis
Craniofacial defects in AP-2 null mutant mice: MORRISS-KAY **18**, 785.
Sticky fingers: *Hox* genes and cell adhesion in vertebrate limb development: NEWMAN **18**, 171.
Trabeculation in the embryonic heart: SEDMERA AND THOMAS **18**, 607.
Mouse
Craniofacial defects in AP-2 null mutant mice: MORRISS-KAY **18**, 785.
Mouse models
Obesity genes and the regulation of body fat content: WEIGLE AND KUIJPER **18**, 867.
mRNA quantitation
Serial analysis of gene expression: ESTs get smaller: ADAMS **18**, 261.
Multi-protein complex
Dosage compensation in *Drosophila* and the 'complex' world of transcriptional regulation: LUCCHESI **18**, 541.
Multiple alternative nucleosome position
The active role of DNA as a chromatin organizer: CASERTA AND DI MAURO **18**, 685.
MuSK
Signaling mechanisms mediating synapse formation: WALLACE **18**, 777.
Mutation
Aging mechanisms in fruit flies: TOWER **18**, 799.
Meiotic recombination: a mechanism for tracking and eliminating mutations?: MCKEE **18**, 411.
Myelin
Myelin mutants: model systems for the study of normal and abnormal myelination: GRIFFITHS **18**, 789.
Myelin proteins
Membrane adhesion and other functions for the myelin basic proteins: STAUGAITIS, COLMAN AND PEDRAZA **18**, 13.
Myosin II
Myosin II function in non-muscle cells: MACIVER **18**, 179.
Myotonic dystrophy
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
Natural selection
Do imprinted genes have few and small introns?: HAIG **18**, 351.
Nearly neutral theory
The current significance and standing of neutral and nearly neutral theories: OHTA **18**, 673.
The neutral theory is dead. Long live the neutral theory: KREITMAN **18**, 678.
Negative regulation
Molecular mechanisms of anti-inflammatory action of glucocorticoids: CATO AND WADE **18**, 371.
Neoplastic transformation
Deregulation of protein synthesis as a mechanism of neoplastic transformation: ROSENWALD **18**, 243.
Netrin
Hierarchical guidance cues in the developing nervous system of *C. elegans*:

WADSWORTH AND HEDGECOCK **18**, 355.
Networks
Supramolecular assembly of basement membranes: TIMPL AND BROWN **18**, 123.
Neural cell adhesion molecules
Promiscuity of fibroblast growth factor receptors: GREEN, WALSH AND DOHERTY **18**, 639.
Neural development
Involvement of the neuregulins and their receptors in cardiac and neural development: CARRAWAY III **18**, 263.
Neuregulin
Involvement of the neuregulins and their receptors in cardiac and neural development: CARRAWAY III **18**, 263.
Neurodegeneration
Expanded glutamines and neurodegeneration – a gain of insight: BATES **18**, 175.
Touch sensation in *Caenorhabditis elegans*: HERMAN **18**, 199.
Neuromuscular disease
Mitochondrial genetics and human disease: GROSSMAN AND SHOUBRIDGE **18**, 983.
Neuromuscular junction
Signaling mechanisms mediating synapse formation: WALLACE **18**, 777.
Neuronal interaction
Epigenic factors and midbrain dopaminergic neurone development: PERRONE-CAPANO AND DI PORZIO **18**, 817.
Neutral theory
The current significance and standing of neutral and nearly neutral theories: OHTA **18**, 673.
The neutral theory is dead. Long live the neutral theory: KREITMAN **18**, 678.
Nidogen
Supramolecular assembly of basement membranes: TIMPL AND BROWN **18**, 123.
Nigrostriatal system
Epigenic factors and midbrain dopaminergic neurone development: PERRONE-CAPANO AND DI PORZIO **18**, 817.
Nitric oxide
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Notch
Asymmetry – where evolutionary and developmental genetics meet: BATTERHAM, DAVIES, GAME AND MCKENZIE **18**, 841.
Nuclear localization
Membrane adhesion and other functions for the myelin basic proteins: STAUGAITIS, COLMAN AND PEDRAZA **18**, 13.
Nuclear RNA
hnRNP particles: SAMARINA **18**, 595.
Nuclear trafficking
The small nuclear GTPase Ran: how much does it run?: RUSH, DRIVAS AND D'EUSTACHIO **18**, 103.
Nuclear transplantation
Nuclear transplantation in mammals: remodelling of transplanted nuclei under the influence of maturation promoting factor: FULKA, JR, FIRST and MOOR, **18**, 835.
Nucleic acid binding molecules
A case of convergent evolution of nucleic acid binding modules: GRAUMANN AND MARAHIEL **18**, 309.
Nucleic acid binding proteins
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Nucleo-cytoplasmic shuttling
The roles of heterogeneous nuclear ribonucleoproteins (hnRNP) in RNA metabolism: WEIGHARDT, BIAMONTI AND RIVA **18**, 747.
Nucleosome binding
Remodeling chromatin structures for transcription: what happens to the histones?: STEGER AND WORKMAN **18**, 875.
Nucleosomes
hnRNP particles: SAMARINA **18**, 595.
UV damage and repair mechanisms in mammalian cells: TORNALETTI AND PFEIFER **18**, 221.
Nucleus
Electric fields at the nuclear membrane?: MATZKE AND MATZKE **18**, 849.
Octadecanoids
Systemin – a polypeptide defense signal in plants: SCHALLER AND RYAN **18**, 27.
Oligodendrocyte
Myelin mutants: model systems for the study of normal and abnormal myelination: GRIFFITHS **18**, 789.
Oncogenes
Deregulation of protein synthesis as a mechanism of neoplastic transformation: ROSENWALD **18**, 243.
Src and the control of cell division: TAYLOR AND SHALLOWAY **18**, 9.
Organ abortion
Regulation of sex determination in maize: IRISH **18**, 363.
Organelle gene expression
Green life: control of chloroplast gene expression: LINK **18**, 465.
Organelle transport
Kinesin proteins: a phylum of motors for microtubule-based motility: MOORE AND ENDOW **18**, 207.
Organizer
The coming of age of ventralising homeobox genes in amphibian development: LEMAIRE **18**, 701.
Organogenesis
Tadpole competence and tissue-specific temporal regulation of amphibian metamorphosis: roles of thyroid hormone and its receptors: SHI, WONG, PUZIANOWSKA-KUZNICKA AND STOLOW **18**, 391.
Origin of life
Evolution of hydrothermal ecosystems on earth (and Mars?): GILLINGS **18**, 515.
Oxidative phosphorylation
Mitochondrial genetics and human disease: GROSSMAN AND SHOUBRIDGE **18**, 983.
Oxidative stress
A new lease of life for an old enzyme: MARTINI AND URSINI **18**, 631.
Activation of mammalian gene expression by the UV component of sunlight – from models to reality: TYRRELL **18**, 139.
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
p53
Signalling to p53: where does it all start?: KASTAN **18**, 617.
Paradigm
Are there 'Kuhnian' revolutions in biology?: WILKINS **18**, 695.
Kuhnian revolutions in developmental biology: BARD **18**, 937.
Paranthropus
Human evolution: WOOD **18**, 945.
Pattern
Controlling growth of the wing: Vestigial integrates signals from the compartment boundaries: COHEN **18**, 855.
Genes, cellular interactions and cell lineages in the determination of plant trichome spacing: SACHS **18**, 443.
Sticky fingers: *Hox* genes and cell adhesion in vertebrate limb development: NEWMAN **18**, 171.
Pax-6
Lens development and crystallin gene expression: many roles for Pax-6: CVEKL AND PIATIGORSKY **18**, 621.
Periodic initiation
Cooperative relaxation of supercoils and periodic transcriptional initiation within polymerase batteries: GUPTASARMA **18**, 325.
Phenotype
Dosage-dependent modification of position-effect variegation in *Drosophila*: HENIKOFF **18**, 401.
EST! EST!! EST!!!: HARTL **18**, 1021.
Phosphatase
The mechanism of bacterial asymmetric cell division: WAY **18**, 99.
Phosphorylation-specific antibody
Dynamic property of intermediate filaments: regulation by phosphorylation: INAGAKI, MATSUOKA, TSUJIMURA, ANDO, TOKUI, TAKAHASHI AND INAGAKI **18**, 481.
Pituitary
Brain POU-er: SHARPE AND MORGAN **18**, 347.
Plant cells
Plant cell enlargement and the action of expansins: COSGROVE **18**, 533.
Plant development
A role for transcriptional repression during light control of plant development: VON ARNIM AND DENG **18**, 905.
Plant epidermis
Genes, cellular interactions and cell lineages in the determination of plant trichome spacing: SACHS **18**, 443.
Plant hormone
DNA elements responsive to auxin: ABEL, BALLAS, WONG AND THEOLOGIS **18**, 647.
Plant transcription factors
Green life: control of chloroplast gene expression: LINK **18**, 465.
Plants
Systemin – a polypeptide defense signal in plants: SCHALLER AND RYAN **18**, 27.
Plasma membrane
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
Plastid development
Green life: control of chloroplast gene expression: LINK **18**, 465.
Pleckstrin homology (PH) domains
The pleckstrin homology domain: an intriguing multifunctional protein module: SHAW **18**, 35.
Polarised membrane transport
Polarised membrane traffic in hepatocytes: WILTON AND MATTHEWS **18**, 229.

Politics
The new scientific spirit: LAVELLE AND D'ARI **18**, 603.
Polymorphism
The structural puzzle of how serpin serine proteinase inhibitors work: WRIGHT **18**, 453.
Population size
At mid-point in the molecular revolution: NEEL **18**, 943.
The current significance and standing of neutral and nearly neutral theories: OHTA **18**, 673.
The neutral theory is dead. Long live the neutral theory: KREITMAN **18**, 678.
Position-effect variegation
Dosage-dependent modification of position-effect variegation in *Drosophila*: HENIKOFF **18**, 401.
Post-transcriptional control
Iron regulatory proteins 1 and 2: HENDERSON **18**, 739.
POU-domain proteins
Brain POU-er: SHARPE AND MORGAN **18**, 347.
Premature aging
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
Procollagen C-proteinase
BMP-1 and the astacin family of metalloproteinases: a potential link between the extracellular matrix, growth factors and pattern formation: SARRAS JR **18**, 439.
Programmed cell death
Cytokinins in plant senescence: from spray and pray to clone and play: GAN AND AMASINO **18**, 557.
Prokaryotes
Molecular mechanisms of drug inhibition of DNA gyrase: LEWIS, TSAI AND WIGLEY **18**, 661.
Protein evolution
The current significance and standing of neutral and nearly neutral theories: OHTA **18**, 673.
The neutral theory is dead. Long live the neutral theory: KREITMAN **18**, 678.
Protein folding
The structural puzzle of how serpin serine proteinase inhibitors work: WRIGHT **18**, 453.
Protein kinase
Dynamic property of intermediate filaments: regulation by phosphorylation: INAGAKI, MATSUOKA, TSUJIMURA, ANDO, TOKUI, TAKAHASHI AND INAGAKI **18**, 481.
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
The pleckstrin homology domain: an intriguing multifunctional protein module: SHAW **18**, 35.
Protein kinase N (PKN)
The Rho GTPase regulates protein kinase activity: NAGATA AND HALL **18**, 529.
Protein synthesis and degradation
Deregulation of protein synthesis as a mechanism of neoplastic transformation: ROSENWALD **18**, 243.
Protein transport
Two is company: the complex travel arrangements of floral homeotic factors: DAVIES **18**, 863.
Protein tyrosine phosphorylation
Signaling mechanisms mediating synapse formation: WALLACE **18**, 777.
Proteinase inhibitors
The structural puzzle of how serpin serine proteinase inhibitors work: WRIGHT **18**, 453.
Protoplasts
Adventures with *Bacillus megaterium* – fusion of bacterial protoplasts: ALFÖLDI **18**, 77.
Protostome
Dorsoventral axis inversion: a phylogenetic perspective: LACALLI **18**, 251.
Pyrimidine dimer
UV damage and repair mechanisms in mammalian cells: TORNALETTI AND PFEIFER **18**, 221.
QTL mapping
The nature of quantitative genetic variation revisited: lessons from *Drosophila* bristles: MACKAY **18**, 113.
Radiant stress
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
Radiation
Moths, myths and mysteries of stress resistance: KOVAL **18**, 149.
Ran
The small nuclear GTPase Ran: how much does it run?: RUSH, DRIVAS AND D'EUSTACHIO **18**, 103.
Ras
Control and integration of cell signaling pathways during *C. elegans* vulval development: SUNDARAM AND HAN **18**, 473.
STATs and MAPKs: obligate or opportunistic partners in signaling: IHLE **18**, 95.
Ras-related proteins
The small nuclear GTPase Ran: how much does it run?: RUSH, DRIVAS AND D'EUSTACHIO **18**, 103.
Rate of evolution
The current significance and standing of neutral and nearly neutral theories: OHTA **18**, 673.
The neutral theory is dead. Long live the neutral theory: KREITMAN **18**, 678.
RecA filament
Unraveling the late stages of recombinational repair: metabolism of DNA junctions in *Escherichia coli*: KUZMINOV **18**, 757.
***recA* mutants**
recA mutants of *E. coli* K12: a personal turning point: CLARK **18**, 767.
Receptors, agrin
Signaling mechanisms mediating synapse formation: WALLACE **18**, 777.
RecG helicase
Unraveling the late stages of recombinational repair: metabolism of DNA junctions in *Escherichia coli*: KUZMINOV **18**, 757.
Recombination
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
recA mutants of *E. coli* K12: a personal turning point: CLARK **18**, 767.
Unraveling the late stages of recombinational repair: metabolism of DNA junctions in *Escherichia coli*: KUZMINOV **18**, 757.
Redox sensors
Modulation by nitric oxide of metalloprotein regulatory activities: DRAPIER AND BOUTON **18**, 549.
Regulatory genes
Brain POU-er: SHARPE AND MORGAN **18**, 347.
Dosage compensation in *Drosophila* and the 'complex' world of transcriptional regulation: LUCCHESI **18**, 541.
Dosage-dependent modification of position-effect variegation in *Drosophila*: HENIKOFF **18**, 401.
Regulatory promoter elements
Green life: control of chloroplast gene expression: LINK **18**, 465.
Replication slippage
Simple sequences and the expanding genome: HANCOCK **18**, 421.
Reptiles
Temperature variation and sex determination in reptiles: PIEAU **18**, 19.
Resource depletion
At mid-point in the molecular revolution: NEEL **18**, 943.
Retinoic acid
Retinoic acid, HOX genes and the anterior-posterior axis in chordates: SHIMELD **18**, 613.
Retinol dehydrogenases
Unusual evolution of 11β- and 17β-hydroxysteroid and retinol dehydrogenases: BAKER **18**, 63.
Rho
The Rho GTPase regulates protein kinase activity: NAGATA AND HALL **18**, 529.
RNA binding
Iron regulatory proteins 1 and 2: HENDERSON **18**, 739.
The role of thymidylate synthase as an RNA binding protein: CHU **18**, 191.
The roles of heterogeneous nuclear ribonucleoproteins (hnRNP) in RNA metabolism: WEIGHARDT, BIAMONTI AND RIVA **18**, 747.
RNA polymerase II
Transcriptional regulation of the dihydrofolate reductase gene: SLANSKY AND FARNHAM **18**, 55.
RNA processing
The roles of heterogeneous nuclear ribonucleoproteins (hnRNP) in RNA metabolism: WEIGHARDT, BIAMONTI AND RIVA **18**, 747.
RNP motifs
A case of convergent evolution of nucleic acid binding modules: GRAUMANN AND MARAHIEL **18**, 309.
Saccharomyces cerevisiae
Cdc6 and DNA replication: limited to humble origins: HEICHMAN **18**, 859.
Meiotic recombination: a mechanism for tracking and eliminating mutations?: MCKEE **18**, 411.
Satiety
Obesity genes and the regulation of body fat content: WEIGLE AND KUIJPER **18**, 867.
Scanning force microscopy (SFM)
Striving for atomic resolution in biomolecular topography: the scanning force microscope (SFM): SCHAPER AND JOVIN **18**, 925.
Schwann cell
Myelin mutants: model systems for the study of normal and abnormal myelination: GRIFFITHS **18**, 789.
Science
Beijing and the 18th International Congress of Genetics: dilemmas and opportunities: WILKINS **18**, 433.

The new scientific spirit: LAVELLE AND D'ARI **18**, 603.
Scientific revolutions
Are there 'Kuhnian' revolutions in biology?: WILKINS **18**, 695.
Kuhnian revolutions in developmental biology: BARD **18**, 937.
Sedimentation analysis
hnRNP particles: SAMARINA **18**, 595.
Segmentation
How do single homeotic genes control multiple segment identities?: DUNCAN **18**, 91.
Segmentation (and *eve*) in very odd insect embryos: FRENCH **18**, 435.
Selection and random drift
The current significance and standing of neutral and nearly neutral theories: OHTA **18**, 673.
The neutral theory is dead. Long live the neutral theory: KREITMAN **18**, 678.
Senescence
Cytokinins in plant senescence: from spray and pray to clone and play: GAN AND AMASINO **18**, 557.
Human senescence: KIRKWOOD **18**, 1009.
Serpins
The structural puzzle of how serpin serine proteinase inhibitors work: WRIGHT **18**, 453.
Sex chromosomes
Is the Y chromosome of *Drosophila* an evolved supernumerary chromosome?: HACKSTEIN, HOCHSTENBACH, HAUSCHTECK-JUNGEN AND BEUKEBOOM **18**, 317.
Sex determination
Regulation of sex determination in maize: IRISH **18**, 363.
Sex determination in humans: SCHAFER AND GOODFELLOW **18**, 955.
Temperature variation and sex determination in reptiles: PIEAU **18**, 19.
***Sgs* genes**
Drosophila Sgs genes: stage and tissue specificity of hormone responsiveness: LEHMANN **18**, 47.
Sigma factor
The mechanism of bacterial asymmetric cell division: WAY **18**, 99.
Signal molecules
Epithelial integrins: SHEPPARD **18**, 655.
Systemin – a polypeptide defense signal in plants: SCHALLER AND RYAN **18**, 27.
Signal transduction
Control and integration of cell signaling pathways during *C. elegans* vulval development: SUNDARAM AND HAN **18**, 473.
Cooperation between soluble factors and integrin-mediated cell anchorage in the control of cell growth and differentiation: JULIANO **18**, 911.
DNA elements responsive to auxin: ABEL, BALLAS, WONG AND THEOLOGIS **18**, 647.
Electric fields at the nuclear membrane?: MATZKE AND MATZKE **18**, 849.
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
The pleckstrin homology domain: an intriguing multifunctional protein module: SHAW **18**, 35.
Silencing
The vagaries of variegating transgenes: MARTIN AND WHITELAW **18**, 919.
Simple sequences
Simple sequences and the expanding genome: HANCOCK **18**, 421.
Sister-chromatid cohesion
Holding chromatids together to ensure they go their separate ways: BICKEL AND ORR-WEAVER **18**, 293.
Site-specific antibody
Dynamic property of intermediate filaments: regulation by phosphorylation: INAGAKI, MATSUOKA, TSUJIMURA, ANDO, TOKUI, TAKAHASHI AND INAGAKI **18**, 481.
Skin
Activation of mammalian gene expression by the UV component of sunlight – from models to reality: TYRRELL **18**, 139.
Small G proteins
The pleckstrin homology domain: an intriguing multifunctional protein module: SHAW **18**, 35.
Somatic cells
Human somatic cell gene therapy: BANK **18**, 999.
Sorting signals
Intracellular trafficking of lysosomal membrane proteins: HUNZIKER AND GEUZE **18**, 379.
Space physiology
Human physiology in space: VERNIKOS **18**, 1029.
Spemann's organizer
The organizer formation: two molecules are better than one: LOMBARDO **18**, 267.
Spindle motility
Kinesin proteins: a phylum of motors for microtubule-based motility: MOORE AND ENDOW **18**, 207.
Spinocerebellar ataxia
Expanded glutamines and neurodegeneration – a gain of insight: BATES **18**, 175.
Sporulation
The mechanism of bacterial asymmetric cell division: WAY **18**, 99.
Src
Src and the control of cell division: TAYLOR AND SHALLOWAY **18**, 9.
Stat proteins
STATs and MAPKs: obligate or opportunistic partners in signaling: IHLE **18**, 95.
Steroid hormones
Drosophila Sgs genes: stage and tissue specificity of hormone responsiveness: LEHMANN **18**, 47.
Stress protein
Activation of mammalian gene expression by the UV component of sunlight – from models to reality: TYRRELL **18**, 139.
Stress response
A new lease of life for an old enzyme: MARTINI AND URSINI **18**, 631.
Activation of mammalian gene expression by the UV component of sunlight – from models to reality: TYRRELL **18**, 139.
Invertebrate gerontology: the age mutations of *Caenorhabditis elegans*: LITHGOW **18**, 809.
Moths, myths and mysteries of stress resistance: KOVAL **18**, 149.
Protein kinase cascades activated by stress and inflammatory cytokines: KYRIAKIS AND AVRUCH **18**, 567.
Stroma
A new role for the stromal cells in kidney development: BARD **18**, 705.
Structural protein with mechano-chemical function
Dynamin GTPase, a force-generating molecular switch: WARNOCK AND SCHMID **18**, 885.
Superresolution
Striving for atomic resolution in biomolecular topography: the scanning force microscope (SFM): SCHAPER AND JOVIN **18**, 925.
Supramolecular assembly
Supramolecular assembly of basement membranes: TIMPL AND BROWN **18**, 123.
Surface potential
Electric fields at the plasma membrane level: a neglected element in the mechanisms of cell signalling: OLIVOTTO, ARCANGELI, CARLÀ AND WANKE **18**, 495.
Systemin
Systemin – a polypeptide defense signal in plants: SCHALLER AND RYAN **18**, 27.
Tasselseed
Regulation of sex determination in maize: IRISH **18**, 363.
Tec family
X-linked agammaglobulinemia (XLA): a genetic tyrosine kinase (Btk) disease: MATTSSON, VIHINEN AND SMITH **18**, 825.
Telomerase
Chromosome healing: spontaneous and programmed *de novo* telomere formation by telomerase: MELEK AND SHIPPEN **18**, 301.
Endless quest: HOLLIDAY **18**, 3.
Telomere
Chromatin diminution in nematodes: MÜLLER, BERNARD AND TOBLER **18**, 133.
Chromosome healing: spontaneous and programmed *de novo* telomere formation by telomerase: MELEK AND SHIPPEN **18**, 301.
The role of chromosome ends during meiosis in *Caenorhabditis elegans*: WICKY AND ROSE **18**, 447.
Temperature
Temperature variation and sex determination in reptiles: PIEAU **18**, 19.
Thermogenesis
Obesity genes and the regulation of body fat content: WEIGLE AND KUIJPER **18**, 867.
Three-dimensional protein structure
A case of convergent evolution of nucleic acid binding modules: GRAUMANN AND MARAHIEL **18**, 309.
Thrombospondin (TSP-1)
The role of thrombospondin-1 in tumor progression and angiogenesis: TUSZYNSKI AND NICOSIA **18**, 71.
Thymidylate synthase
The role of thymidylate synthase as an RNA binding protein: CHU **18**, 191.
Thyroid hormone
Tadpole competence and tissue-specific temporal regulation of amphibian metamorphosis: roles of thyroid hormone and its receptors: SHI, WONG, PUZIANOWSKA-KUZNICKA AND STOLOW **18**, 391.
Tissue atrophy
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
Topoisomerase
Cooperative relaxation of supercoils and periodic transcriptional initiation within

polymerase batteries: GUPTASARMA **18**, 325.
Molecular mechanisms of drug inhibition of DNA gyrase: LEWIS, TSAI AND WIGLEY **18**, 661.
Trabeculation
Trabeculation in the embryonic heart: SEDMERA AND THOMAS **18**, 607.
Training
Do universities do too much research?: BARD **18**, 1.
Transcription
Dosage compensation in *Drosophila* and the 'complex' world of transcriptional regulation: LUCCHESI **18**, 541.
Lens development and crystallin gene expression: many roles for Pax-6: CVEKL AND PIATIGORSKY **18**, 621.
Transcriptional regulation of the dihydrofolate reductase gene: SLANSKY AND FARNHAM **18**, 55.
UV damage and repair mechanisms in mammalian cells: TORNALETTI AND PFEIFER **18**, 221.
Transcription factor
Craniofacial defects in AP-2 null mutant mice: MORRISS-KAY **18**, 785.
Molecular mechanisms of anti-inflammatory action of glucocorticoids: CATO AND WADE **18**, 371.
STATs and MAPKs: obligate or opportunistic partners in signaling: IHLE **18**, 95.
Two is company: the complex travel arrangements of floral homeotic factors: DAVIES **18**, 863.
Transcription initiation complex (TFIID)
Chromatin architectural proteins and transcription factors: a structural connection: VAN HOLDE AND ZLATANOVA **18**, 697.
Transcriptional mechanisms
Cooperative relaxation of supercoils and periodic transcriptional initiation within polymerase batteries: GUPTASARMA **18**, 325.
Transcriptional regulation
Remodeling chromatin structures for transcription: what happens to the histones?: STEGER AND WORKMAN **18**, 875.
Transcytosis
Polarised membrane traffic in hepatocytes: WILTON AND MATTHEWS **18**, 229.
Transgene
The vagaries of variegating transgenes: MARTIN AND WHITELAW **18**, 919.
The world of genome projects: BRENNER **18**, 1039.
Transgenesis
Mouse models of human genetic disease: which mouse is more like a man?: ERICKSON **18**, 993.
Transgenic plant
Cytokinins in plant senescence: from spray and pray to clone and play: GAN AND AMASINO **18**, 557.
Translation factors
Deregulation of protein synthesis as a mechanism of neoplastic transformation: ROSENWALD **18**, 243.
Translational repression
The role of thymidylate synthase as an RNA binding protein: CHU **18**, 191.
Trichomes
Genes, cellular interactions and cell lineages in the determination of plant trichome spacing: SACHS **18**, 443.
Trichothiodystrophy
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
Trinucleotide expansion diseases
Simple sequences and the expanding genome: HANCOCK **18**, 421.
Trinucleotide repeat
CAC – the neglected repeat: SERTEDAKI AND LINDSAY **18**, 237.
Expanded glutamines and neurodegeneration – a gain of insight: BATES **18**, 175.
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
Trypanosome
Antigenic variation in trypanosomes: secrets surface slowly: CROSS **18**, 283.
TSD
Temperature variation and sex determination in reptiles: PIEAU **18**, 19.
Tumor invasion
The role of thrombospondin-1 in tumor progression and angiogenesis: TUSZYNSKI AND NICOSIA **18**, 71.
Tumorigenesis
Signalling to p53: where does it all start?: KASTAN **18**, 617.
Tyrosine hydroxylase
Epigenic factors and midbrain dopaminergic neurone development: PERRONE-CAPANO AND DI PORZIO **18**, 917.
Tyrosine kinase
Involvement of the neuregulins and their receptors in cardiac and neural development: CARRAWAY III **18**, 263.
Ultrabithorax
How do single homeotic genes control multiple segment identities?: DUNCAN **18**, 91.
UNC-6
Hierarchical guidance cues in the developing nervous system of *C. elegans*: WADSWORTH AND HEDGECOCK **18**, 355.
Unstable DNA diseases
Genomic imprinting in unstable DNA diseases: PETRONIS **18**, 587.
UV irradiation
Activation of mammalian gene expression by the UV component of sunlight – from models to reality: TYRRELL **18**, 139.
UV damage and repair mechanisms in mammalian cells: TORNALETTI AND PFEIFER **18**, 221.
Variegation
The vagaries of variegating transgenes: MARTIN AND WHITELAW **18**, 919.
Ventral territories
The coming of age of ventralising homeobox genes in amphibian development: LEMAIRE **18**, 701.
Vertebrate evolution
Retinoic acid, HOX genes and the anterior-posterior axis in chordates: SHIMELD **18**, 613.
Vestigial
Controlling growth of the wing: Vestigial integrates signals from the compartment boundaries: COHEN **18**, 855.
Vg1
The organizer formation: two molecules are better than one: LOMBARDO **18**, 267.
Vimentin
Dynamic property of intermediate filaments: regulation by phosphorylation: INAGAKI, MATSUOKA, TSUJIMURA, ANDO, TOKUI, TAKAHASHI AND INAGAKI **18**, 481.
Vox
The coming of age of ventralising homeobox genes in amphibian development: LEMAIRE **18**, 701.
Vulva
Control and integration of cell signaling pathways during *C. elegans* vulval development: SUNDARAM AND HAN **18**, 473.
Wall creep
Plant cell enlargement and the action of expansins: COSGROVE **18**, 533.
Wing
Controlling growth of the wing: Vestigial integrates signals from the compartment boundaries: COHEN **18**, 855.
Wound hormone
Systemin – a polypeptide defense signal in plants: SCHALLER AND RYAN **18**, 27.
Wound repair
Epithelial integrins: SHEPPARD **18**, 655.
X-linked agammaglobulinaemia (XLA)
X-linked agammaglobulinemia (XLA): a genetic tyrosine kinase (Btk) disease: MATTSSON, VIHINEN AND SMITH **18**, 825.
X-ray crystallography
Molecular mechanisms of drug inhibition of DNA gyrase: LEWIS, TSAI AND WIGLEY **18**, 661.
Xenopus
Tadpole competence and tissue-specific temporal regulation of amphibian metamorphosis: roles of thyroid hormone and its receptors: SHI, WONG, PUZIANOWSKA-KUZNICKA AND STOLOW **18**, 391.
The organizer formation: two molecules are better than one: LOMBARDO **18**, 267.
Xenopus laevis
The coming of age of ventralising homeobox genes in amphibian development: LEMAIRE **18**, 701.
The role of MCM proteins in the cell cycle control of genome duplication: KEARSEY, MAIORANO, HOLMES AND TODOROV **18**, 183.
Xeroderma pigmentosum
Cockayne syndrome – a primary defect in DNA repair, transcription, both or neither?: FRIEDBERG **18**, 731.
Werner syndrome: entering the helicase era: EPSTEIN AND MOTULSKY **18**, 1025.
